Maximum Range	3-4 Km in urban environment Up to 10 Km with optimal conditions ⁵

1. It is possible to trace the IRNSS signal with Firmware update.
2. Accuracy and reliability are generally subject to satellite geometry (DOPs), multipath, atmospheric conditions and obstructions. In static mode they are subject even to occupation times: the longer is the Baseline, the longer must be the occupation time.
3. Depends on SBAS system performance.
4. Network RTK precision depends on the network performances and are referenced to the closest physical base station.
5. Varies with the operating environment and with electromagnetic pollution.
